

Hustly

A Complete Package For the Freelancing Society.

Abstract

Freelancing platforms have made it easier for people to find work and hire talent, but the process can still feel overwhelming for both sides. Clients often have to go through multiple profiles before finding someone who actually fits their project, while freelancers spend time searching through projects, preparing proposals and trying to stand out. HUSTLY is designed as a more focused freelancing experience where projects, people and collaboration are brought together in one place.

The platform focuses on:

- Better project–freelancer matching
- Portfolio-first discovery
- Clear project requirements
- Easier collaboration
- Better visibility for freelancers
- A smoother hiring experience

Existing System

Platform	Main approach	Strength	Gap we noticed
Upwork	Job → proposals → hiring	Huge talent pool & detailed hiring workflow	Can feel overwhelming when comparing many candidates
Fiverr	Predefined services / gigs	Simple service discovery	More focused on individual services than building a complete project team
Contra	Portfolio → project → payment	Excellent freelancer identity & project management	Strong portfolio approach, but discovery can still depend on client knowing what they want
Toptal	Curated talent	Strong screening & quality perception	More selective and less accessible for early-stage freelancers

The problem isn't a lack of freelancers.
It's finding the right fit.

Proposed System

A two-sided freelancing platform designed around project fit rather than just job listings.

CLIENT SIDE

Describe → Discover → Compare → Hire → Collaborate

FREELANCER SIDE

Discover → Evaluate → Apply → Work → Grow

01 — Project-first matching

Clients describe the actual project, rather than simply searching by skill.

02 — Portfolio-first discovery

Clients see the actual work first.

Large visual projects → relevant experience → profile.

03 — Better opportunities for freelancers

Freelancers get:

Opportunity Radar Projects that fit their skills, availability and interests.

04 — Project Room

Once hired: Chat + Files + Tasks + Milestones + Progress

in one workspace.

05 — AI as an assistant, not the product

AI supports decisions, but people remain at the centre of the platform.

Advantages

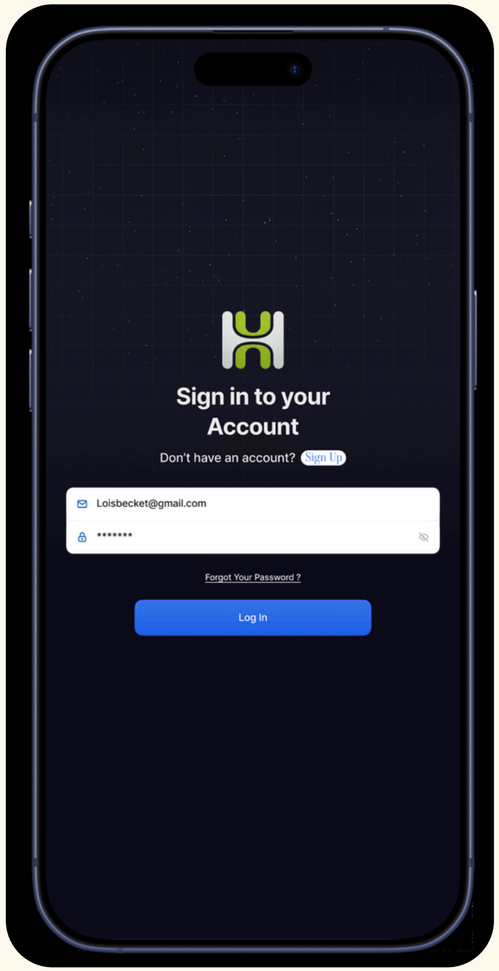

Why Hustly ?

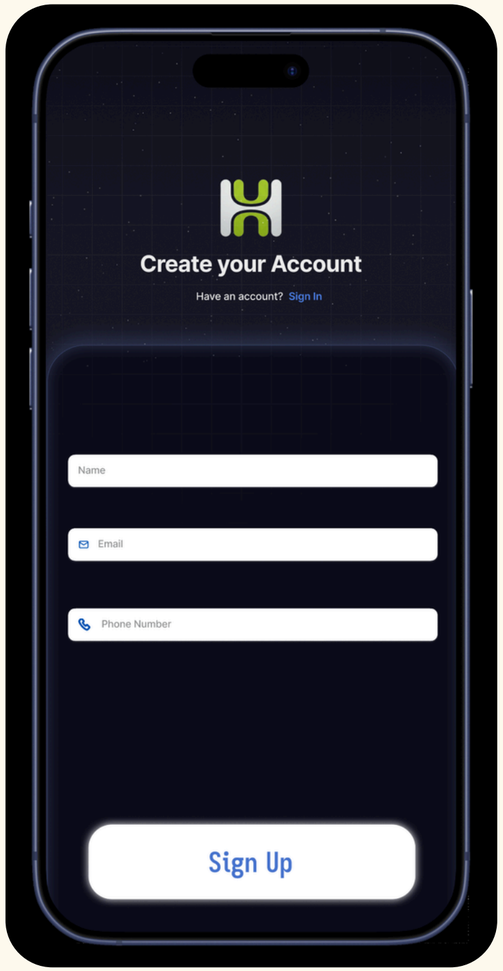

Existing Approach	Hustly Approach
Search through jobs	Discover relevant opportunities
Search through freelancers	Find project-fit talent
Ratings	Skills + work + project fit
Generic proposals	Relevant portfolio-based proposals

Existing Approach	Hustly Approach
Individual freelancer focus	Team-based project support
Separate communication	Centralized Project Room
Static profile	Profile that grows with work
Find → Hire	Find → Collaborate → Grow
